### Herencia ligada al sexo

La especie humana posee 46 cromosomas dispuestos en 23 pares, de los cuales 22 son somáticos o autosomas porque heredan caracteres no sexuales y uno es una pareja de cromosomas sexuales llamados también heterocromosomas o gonosomas, identificados como XX en las mujeres y como XY en los hombres.

La herencia ligada al sexo se refiere a la transmisión de genes que se encuentran en el sector no homogéneo, es decir, el heterólogo del cromosoma X heredado del padre.
